# ClockCard

Real Time Clock on a PC Card

Beagle Software's ClockCard is an accurate real time clock (RTC) complete on a PC card. It can serve as a replacement for the clock on your computer's motherboard.

Use ClockCard to dramatically improve the accuracy of your computer's clock. The clock on ClockCard is based on a highly stable oscillator circuit and will maintain time on your PC to within 2 seconds/month error within a temperature-stable environment (5 seconds/month on ISA version). ClockCard can be synchronized to the Atomic Clock on a periodic basis using ClockWatch®.

Key Features:

- Hardware corrects system when it loses date or time when powered off. Provides correct date and time at boot up.
- Software corrects clock that loses time when powered on.
- On-board Dallas Real Time Clock (RTC) takes the place of the existing motherboard clock.
- Works with most PC hardware.
- Can be integrated with ClockWatch® to provide a two-leveled time standard.
- Available time setting utility lets you view or set time on both ClockCard and Windows®.
- Maintains correct date and time even with CMOS battery failure.
- Available in both PCI and ISA slot versions.

ClockCard PCI

Our PCI options all come bundled with ClockWatch®, and are compatible with Windows® 98SE/NT/2k/XP/2003.

ClockCard PCI Pro Bundled with ClockWatch® Pro	(CCPCINT)	**$229.95**
